

MongoDB CRUD operations :

The screenshot shows the Eclipse IDE with a Java project named 'Mongo'. The package explorer on the left shows the 'Mongo' package. The main editor displays the 'mongodb_crud.java' file. The code defines a 'mongodb_crud' class with a 'main' method that connects to MongoDB, accesses the 'vitcampus' database, and performs CRUD operations. The console output shows the results of these operations.

```
7
8 public class mongodb_crud {
9
10 public static void main(String[] args) {
11
12     // Connect to MongoDB
13     MongoClient mongoClient =
14         MongoClient.create("mongodb://localhost:27017");
15
16     // Access Database
17     MongoDB database =
18         mongoClient.getDatabase("vitcampus");
```
